

«Stel – Computer Systems»

The Russian company «Stel - Computer Systems» was founded in 1991 and specializes in the field of the advanced information technologies, being the developer and the system integrator of complex solutions. The main business directions: mobile video conferencing systems, telemedicine, speech technologies, distance learning systems.

The hardware-software complexes STEL TK for the support of telemedical consultations and remote diagnosing are successfully used in a number of leading medical institutions of Russia and are considered to be reliable tools for the medical process support, fitting the tendencies of the modern medicine development.

The important direction of the «Stel – Computer Systems» activity is the work in the field of speech technologies and the creation of automatic speech recognition systems. Our products are the system «Voice – Anonym» for the speech and «Voice – Guard» for the voice access control.
